Gas Soldering Iron

Little Gem No. 1

Price, complete, with Soldering Paste and Wire Solder, less tubing\$

Put a "Little Gem" on the job in place of your cumbersome blast and heavy soldering irons. It's less than twelve inches long, light in weight and easy to handle. It takes up little room in your kit, but you will be surprised at the heat it generates and the many practical requirements it will serve, among others as a blast torch or branding tool.

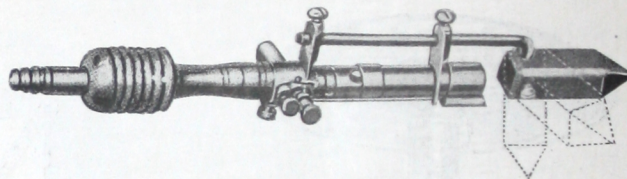

Attach to gas by flexible hose or metallic tubing, to end of handle. Tubing can be any length, permitting access to distant work. Can furnish tubing any length required.

Burns gas and is automatic in operation. Light the pilot and it is "Johnny on the Spot" until you turn off the gas. When you need it, just push down the upper valve, or button, and you have a flame hot enough to melt any of the soft metals for soldering. Release the pressure and a spring closes the valve, shutting off the gas, but leaving the pilot lighted. Want it to burn steadily? Well, there's a catch provided to hold open the valve until you close it.

"An Important Feature of No. Two Blast"

Should the piston valve be damaged by accident, or otherwise, a new piston and sleeve can be had at small cost, avoiding buying an entire new blast. To replace piston valve, unscrew cap on bottom and lift sleeve and piston out.

Attach a soldering copper and you have the finest little

Gem Senior No. 2

Price, complete, with Soldering Paste and Wire Solder, less tubing\$

soldering tool you ever saw. In a few seconds it will bring the copper to just the temperature you need, and it saves tinning, too, because the flame plays against the thick end of the iron and not against the point.

Hundreds of these handy little all-around tools are in use in all lines of business, from jewelers and dentists to plumbers and automobile repair shops. For removing paints and varnishes they are unequaled. There is practically no limit to their usefulness. They can be adjusted to all gas pressure and are fitted with adjustable air mixers that enable you to get the best results with all qualities of gas under all conditions. They last for years.

The "Little Gem" is economical in operation. Even when burning steadily, the gas consumption is only three feet an hour. Moreover, it will save its cost many times in time and convenience.

Made in two sizes: "Little Gem" No. 1, which heats copper up to 6 ounces, and "Gem Senior" No. 2, which heats copper up to one and one-half pounds per pair. About these coppers, look at the illustration. It shows one style of copper that can be adjusted to any angle for any kind of work. In fact, you can get any style of copper you desire.

The "Little Gem"—packed in separate boxes with a can of soldering paste, which takes the place of acid and rosin and eliminates disagreeable odors, wire solder, and full directions for operating.
